DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5/24/2004 has been entered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-2, 4-8, 10-12, 14-19, and 21-32 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent Number 6,088,722 to Herz et al..

Herz teaches the invention as claimed (As in exemplary claim 28) including a system comprising: a broadcast system; and one or more client systems coupled to the broadcast system; wherein the broadcast system is coupled to broadcast meta-data to a plurality of client systems, the meta-data including sets of descriptors and/or attributes describing respective pieces of broadcast programming content from among a plurality of pieces of broadcast programming content up for consideration to be included in a future, yet to be scheduled, broadcast (col. 12,

Art Unit: 2142

lines 26-48 and col. 14, lines 24-64); wherein the plurality of client systems are coupled to rate in response to a content rating table one or more of the plurality of pieces of broadcast programming content described by the meta-data, the content rating table generated using the meta-data and containing ratings derived from observations of data pieces of broadcast programming content having similar descriptors and/or attributes to the descriptors and/or attributes included in the meta-data that have been previously accessed via that client system (col. 12, lines 26-48 and col. 14, lines 24-64); wherein the one or more client systems are coupled to transmit to the broadcast system the ratings of the plurality of pieces of broadcast programming content (col. 14, lines 17-23); wherein the broadcast system is coupled to select a portion of the plurality of pieces of broadcast programming content in response to the ratings received for the plurality of client systems (col. 22, line 64-col. 23, line 38); and wherein the broadcast system is further coupled to broadcast the selected portion of the plurality of pieces of broadcast programming content (col. 22, line 64-col. 23, line 38).

As to claims 2, 15, and 25, Herz teaches a machine readable medium and method wherein the selected portion of the plurality of pieces of broadcast programming content that are broadcast are pieces of broadcast programming content having higher content ratings than a remaining portion of pieces of broadcast content that are not selected (col. 22, line 64-col. 23, line 38).

As to claims 4, 12, 16, and 23, Herz teaches a system able to receive a broadcast schedule of the second plurality of pieces of broadcast programming content prior to selectively receiving the portion of the second plurality of pieces of broadcast programming content (col. 47, lines 9-30).

Art Unit: 2142

As to claims 5 and 17, Herz teaches a system able to broadcast a broadcast schedule of the meta-data prior to broadcasting the meta-data to the plurality of client systems (col. 47, lines 9-30).

As to claim 6, Herz teaches a method wherein broadcasting the selected portion of the plurality of pieces of broadcast programming content to the plurality of client systems comprises broadcasting one of the plurality of pieces of broadcast programming content having a higher rating prior to broadcasting one of the plurality of pieces of broadcast programming content having a lower rating (col. 22, line 64-col. 23, line 38).

As to claims 8, 11, 19, 22, and 27, Herz teaches receiving a meta-data broadcast schedule broadcast by the server system, the client system activated in response to the meta-data broadcast schedule (col. 47, lines 9-30).

As to claims 29-32, Herz teaches a system wherein each of the plurality client systems is coupled to selectively receive and store a portion of the selected portion of the plurality of pieces of broadcast programming content in response to a content rating table associated with each respective one of the plurality of client systems (col. 47, lines 9-30).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Douglas B Blair whose telephone number is 703-305-5267. The examiner can normally be reached on 8:30am-5pm Mon-Fri.
